

## Product Data Sheet HReCONNECT

Stand: 7. December 2005

**Candidate data, structurally registered and selected -** The web-based application management records candidate data in an appealing, interactive online applicant form, which reflects your information requirements. The data is immediately available in a high-performance candidate databank – piles of paper and filing cabinets are a thing of the past.

Web-based access to candidate data accelerates your coordination and selection processes. What you personally attach importance to, is your decision. Incoming applications may be presorted in accordance with must-have criterion and evaluated in relation to comprehensive job profile matching as well as individual selections.

**Management and documentation of candidate communication** – Whether it is a rejection, invitation to a personal discussion or an automatic confirmation of receipt, with the template-based candidate communication, you converse with your candidates in a matter of seconds. The webbased access to the candidate's history allows you to inform all employees concerned, about the status of each individual candidate.

A combination of standard text modules and applicant individual elements provide for a personal touch during contact with the candidates.

**Development and care of relationships to High-Potentials** – Highly qualified candidates, not suitable for the currently announced position, may be supplied with current information via BRM, thus binding them to your company.

Follow-ups and special measures of communication allow you to remain in contact to High-Potentials and fall back on them during demand of suitable manpower.

	1		
Setup-Phase 1 x initial	Data entry of standard replies and BRM-text	Business-specific ad- justment of the online application form	Set-up of decision levels and user administration
